Network

We, SAMSON Co., Ltd., have been engaged in the manufacture and sales of various Boilers and Food Processing Equipment since our foundation in 1945, and have been enjoying a good reputation from customers in various industrial fields of Japan.

In overseas markets, we have devoted ourselves to exporting our products into mainly Asian countries for a long period and have delivered them to many customers.

After delivery, our authorized distributors in the respective countries have taken care of maintenance services on our equipment through the cooperation from customers.

We are supporting our distributors for the improvement of maintenance technology and we hope our customer can operate our products safely without any trouble.

Vacuum Cooler

EL-60VSH/100VSH/120VSH/180VSH/240VSH EL-150PTH/200PTH

sustainable future of energy and food

Samsolution Food System

EL Series

Only dry vacuum pump is used !

Much safer ! Quick(Rapid) cooling the freshly made tasty food directly !

To supply safety school lunch.

EL can prevent food from bacteria growth because EL pass through a temperature range 20 to 50 °C (active temperature range for bacteria growth) in a short period by rapid cooling.

> Rapid cooling

Meals for nursing care and social welfare

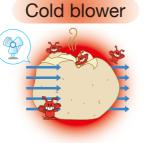

To supply safety and delicious meals.

Advantage of difference in method

Vacuum cooler

Since the vacuum cooler takes heat uniformly from the whole food product, it can cool down from the food core with no heat remained and as a result, you can provide high quality food.

D°C

The cold blower gathers bacteria in the air and blows it directly on the food, so it is unsanitary.

Sanitary

With the dry vacuum pump, the water vapor is directly discharged to the outside via the drain tank.

It is very sanitary condition.

💥 Easy cleaning with a cleaning gun …

A cleaning gun is equipped as standard. It is easy to wash the inside of the cooling tank, the door, and the drain tank that need routine cleaning.

Easy cleaning with automatic washing operation

By one push of switch button, you can clean the inside of piping and heat exchanger which are difficult for hand washed.

Easiness

Easy operation with color liquid crystal touch panel!You can start frequently used operating patterns with one touch.

X Easy operation with icon

The screen display improves visibility with easy-to-understand large icons and can be operated easily.

HACCP is supported by storing operation history

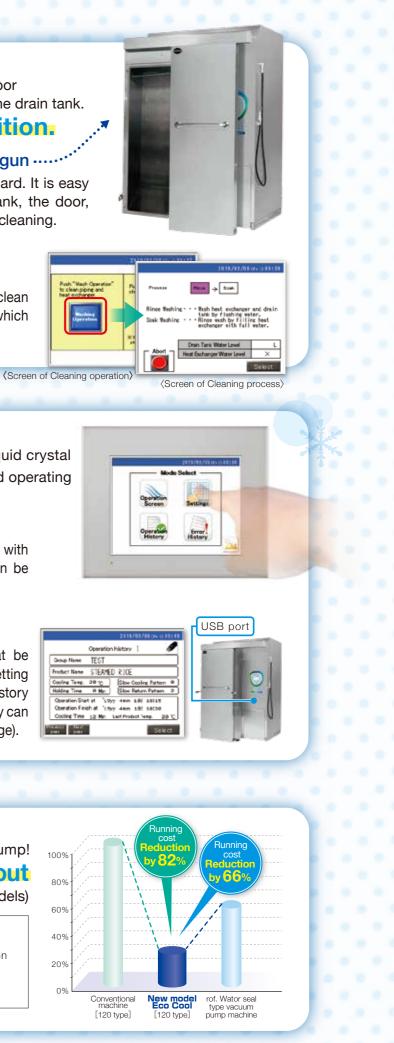

You can easily read out the data that be memorized the operation contents (setting contents, temperature, time) and error history of the last 50 cases. The operation history can be retrieved outside as screen data (image).

Energy saving

Energy saving design by dry vacuum pump! Running cost reduced by 82% without steaming! (Compared to conventional models)

Cooling temperature: 10°C Throughput (Cooling Volume): Installation 20 Batch/day, 260 day Operation Electricity: 15 JPY/kwh conditions Steam: 7 JPY/kg Water: 500 JPY/m³

JPY = Japanese Yer

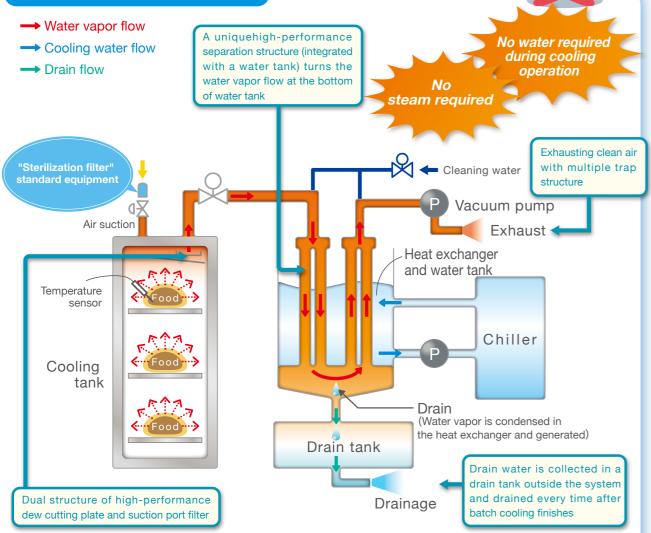

Very hygienic(sanitary) by clean exhaust!

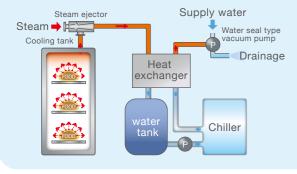

Clean flow design to realize the sanitary condition

Clean air is exhausted from the dry vacuum pump. Water vapor vaporized from ingredients (food) is drained sufficiently and discharged in a timely, so it is very sanitary because it does not store dirt in vacuum piping and heat exchanger those are difficult to clean up ordinary

Eco Cool Dry Vacuum System

Water-seal type vacuum pump system [Demerit of old system]

Since it connects the cooling tank and the drainage through the vacuum pump by one-way, there might be the risk of backflow of dirt due to following reasons.

-Contaminants from foodstuff might come into the vacuum pump and the check valve.

-Stop of water supply might cause a malfunction of the vacuum pump.

) Standard cooling volume is based on the specific heat of food at 0.8 cal/K $\cdot \, g$ 2) Cooling capacity is based on the outside air temperature below 30 °C. (slow cooling / recovery time etc. are not included.) 3) Cooling capacity is based on our test standard. (Measure the center temperature)

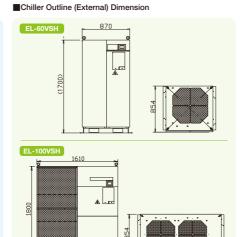

We regularly hold various seminars on "food".

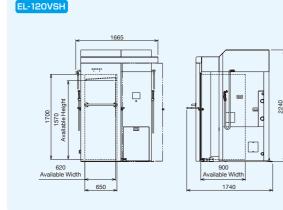

Packaged design makes it neat and compact!

Installation Outline (External) Dimensio

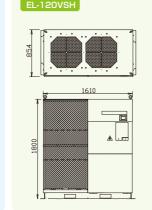

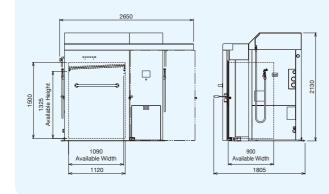

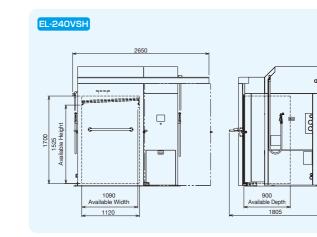

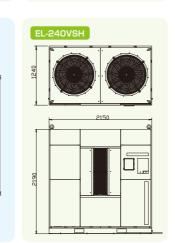

Chiller Outline (External) Dimension

EL-180VSH

Pass-Through system

keeps products sanitary after cooling.

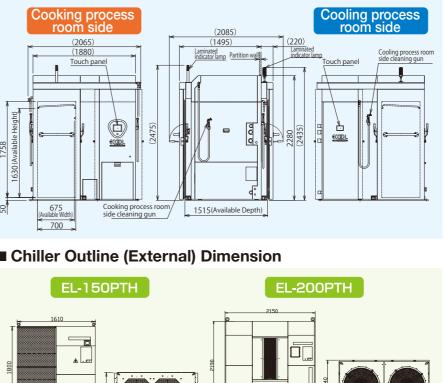

In addition to the features of Eco Cool, the Pass-Through series is equipped with user-friendly functions on both sides of the **COOKING** and **COOIING** rooms as standard.

Cleaning gun Laminated indicator lamp

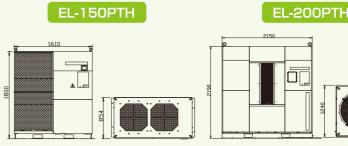

Cleaning gun near the operator could be used to clean the inside of the cooling tank and the backside of the door.

Equipment status of "Normal operation", "Error", "Cooling complete" are displayed for easy check from a distance.

■ Installation Outline (External) Dimension

■ Chiller Outline (External) Dimension

Both front and rear door operations enables the food products to flow in one direction, reduces the risk of contamination and

Touch panel Cooling temperature or equipment status would be displayed on the cooling room side.
